- What's NEWAGE ?
- New result by NEWAGE-0.3a'
- Commissioning of NEWAGE-0.3b'
- Head-tail R&D with NEWAGE-0.1a
- Summary

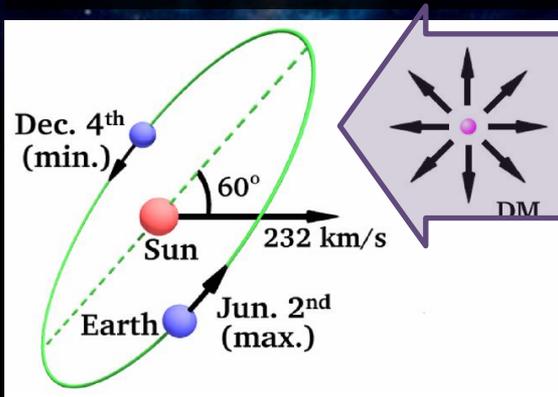

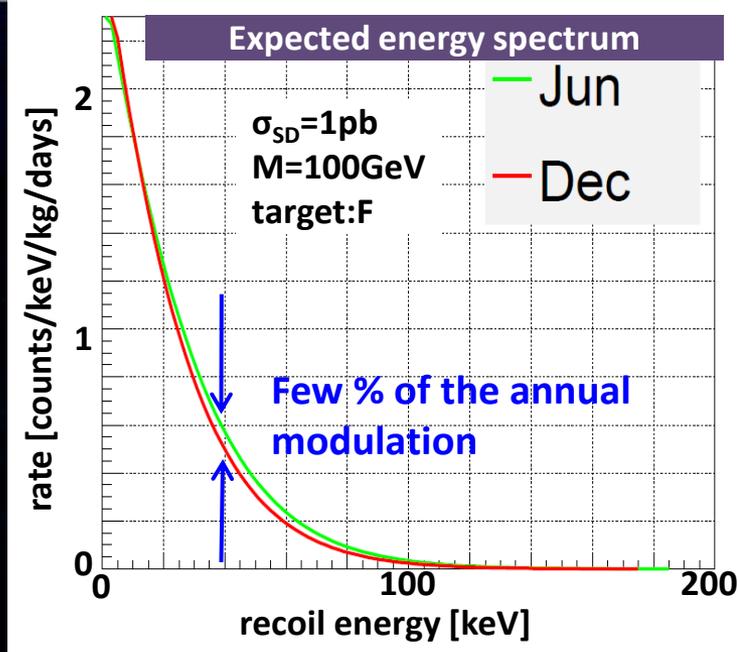

Direction Sensitivity

1. Annual modulation (conventional)

Large mass \rightarrow Solid or liquid detector
 Require for 3σ : ~ 10000 events

2. Direction sensitivity (new)

Nuclear track \rightarrow Gas detector (or emulsion)
 Require for 3σ : ~ 20 events

CYGNUS 2013
 4th International Workshop on Directional Dark Matter Detection

10 - 12 June 2013,
 Oarks Canal Park Hotel,
 Toyama, Japan

Scientific Program

Technical program on direction sensitive detectors
 Data analysis (2D/3D track reconstruction, background rejection, ...)
 Sense recognition : analysis strategies & measurements
 Experimental results from directional prototype
 Theoretical studies
 Dark matter halo dynamics
 Related activities

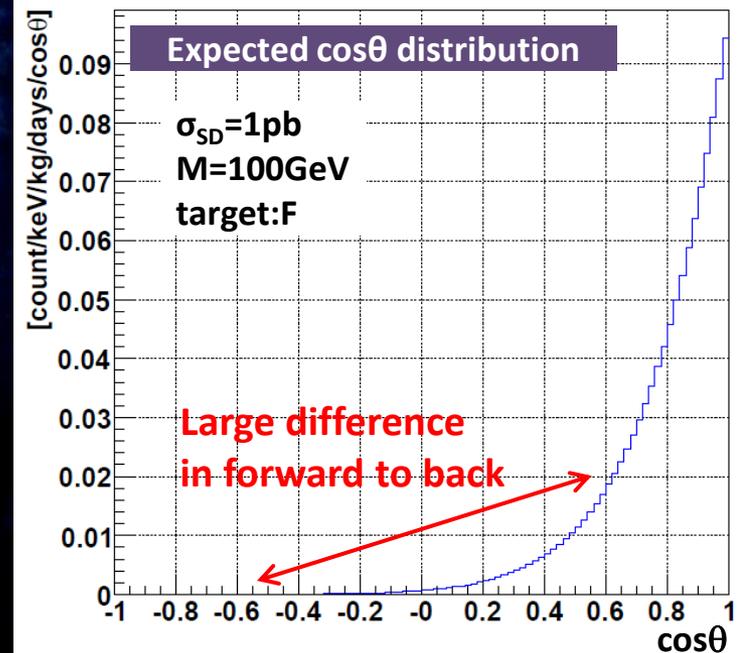

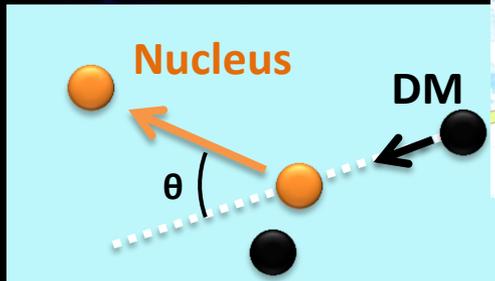

International Organizing committee

James Beacom (Brandeis College, USA)
 Ismael Comas-Forgas (CEA Saclay, France)
 Anne Green (U. of Nottingham, UK)
 Agnieszka H. & Zanglauer, Spain
 Daniel Lindsley (University of New Mexico, USA)
 Patrick Moore (IPSC Grenoble, France)
 Kazuo Maichi (Kobe University, Japan)
 Jordan Madsen (Hull University, UK)
 Ludovic Niles (Nagoya University, Japan)
 Daniel Sauer (IPSC Grenoble, France)
 Daniel Steigman (Brown University, USA)
 Neil Spooner (U. of Sheffield, UK)
 Tom Tait (University of Warwick, UK)

Local Organizing committee

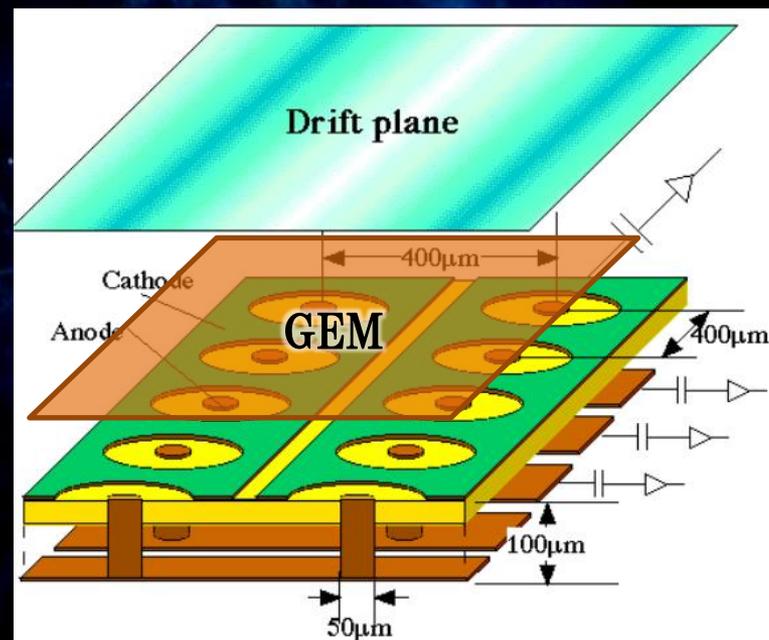

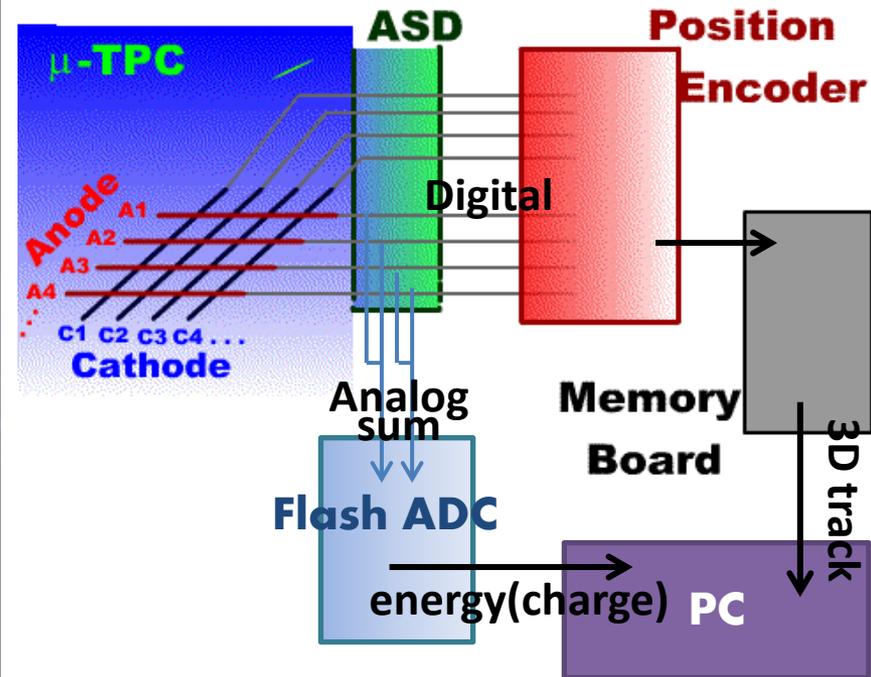

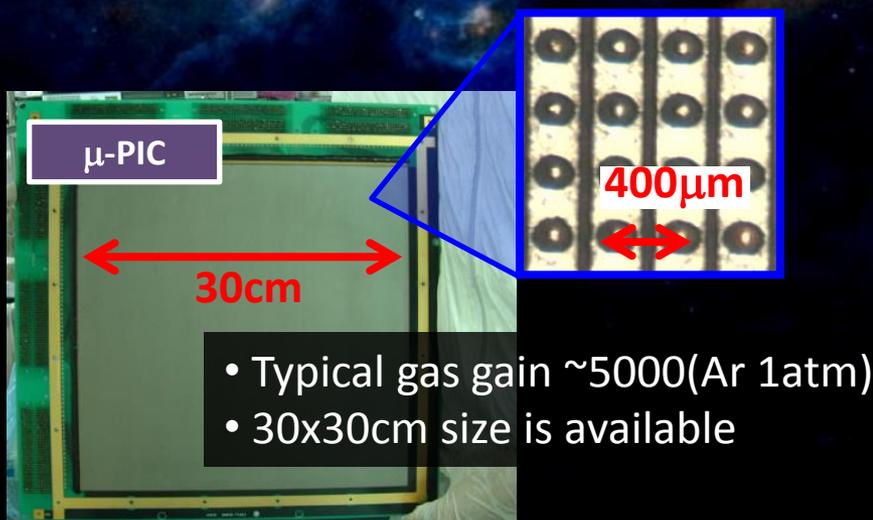

K. Maichi (Kobe Univ.)
 T. Naka (Nagoya Univ.)
 A. Takahashi (Kobe Univ.)
 H. Sekiya (JCR, Univ. of Tokyo)
 K. Nakamura (Kobe Univ.)
 K. Horiuchi (Kobe Univ.)

NEWAGE-0.3a'

- $23 \times 28 \times 31 \text{ cm}^3$
- $152 \text{ torr CF}_4 = 11.48 \text{ g}$

NEWAGE-0.3a' updates

- Sensitivity Improvement

- α particle
 - radon gas
 - gamma rays
 - DAQ upgrade
- > Low BG aiming 1/10
- > Low threshold

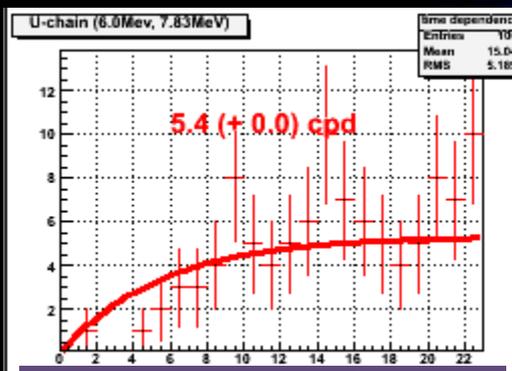

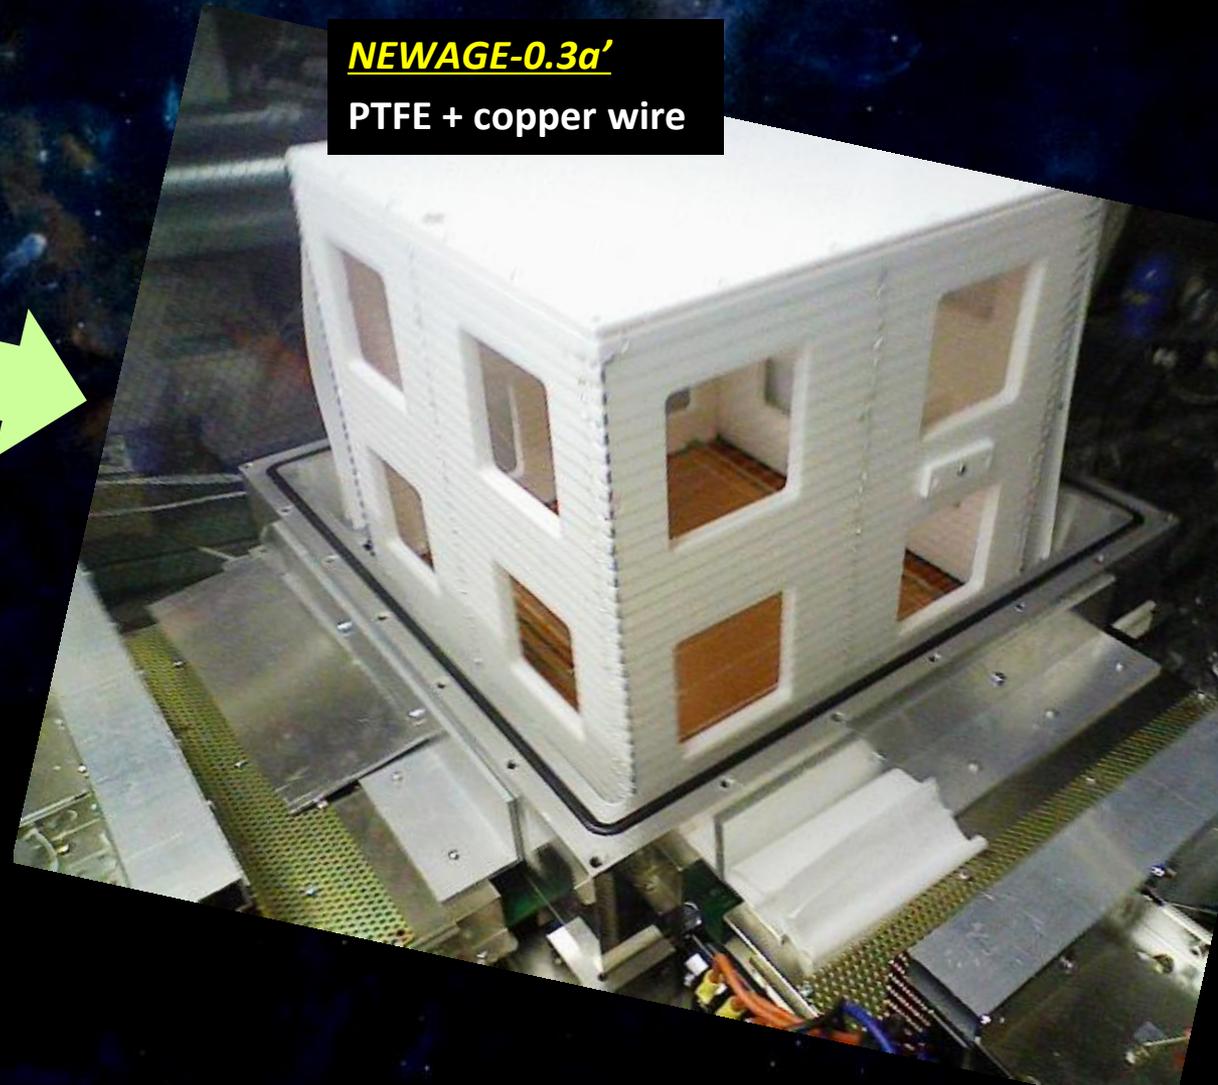

• radon, gamma, alpha: "clean" materials

• to $<1/10$ radon emanation level

NEWAGE-0.3 α
glass-reinforced
fluoro-plastic

NEWAGE-0.3 α'
PTFE + copper wire

Time dependence of Rn rate measured by Rn detector

Radon: charcoal

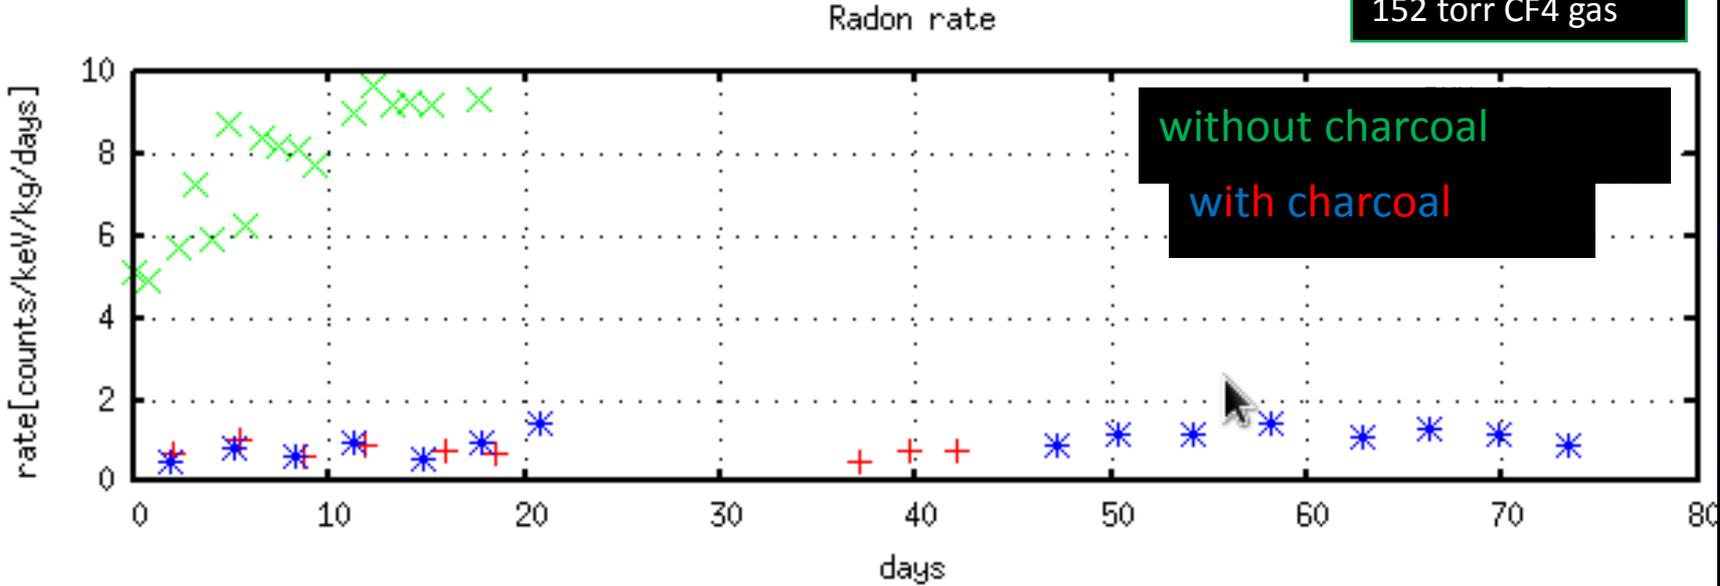

- gas circulation system
- monitor radon rate ($\sim 6\text{MeV}$)
- radon rate $\sim 1/10$ after days10

charcoal filter $\sim 100\text{g}$
(TSURUMICOAL 2GS)

getter pump
(SAES GETTER C400-2DSK)

circulation
(Teflon bellows pump)

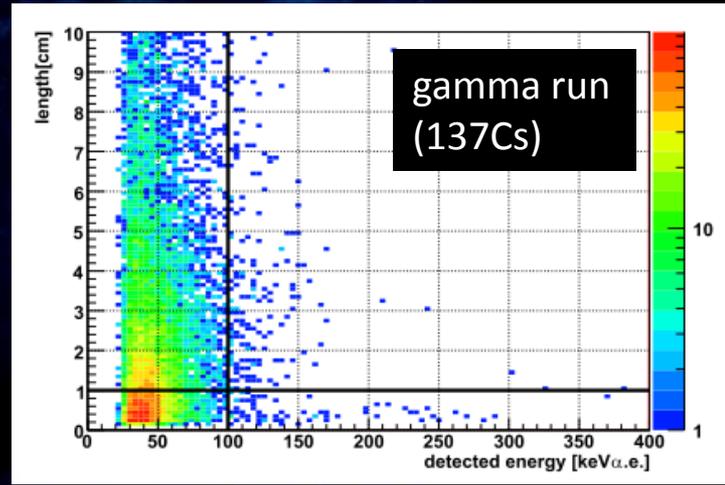

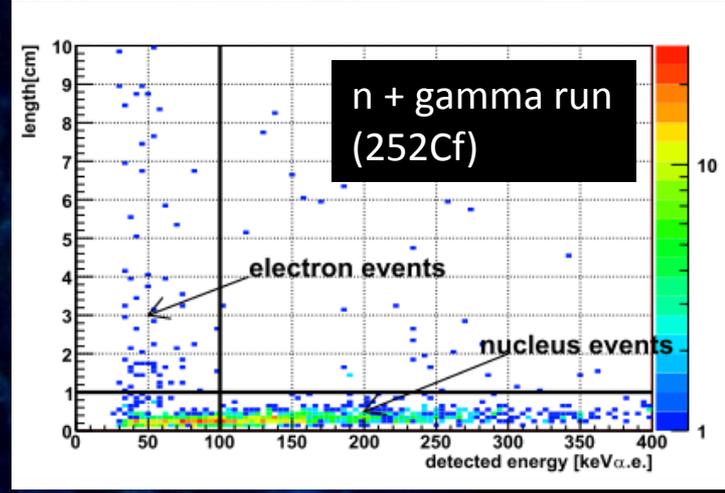

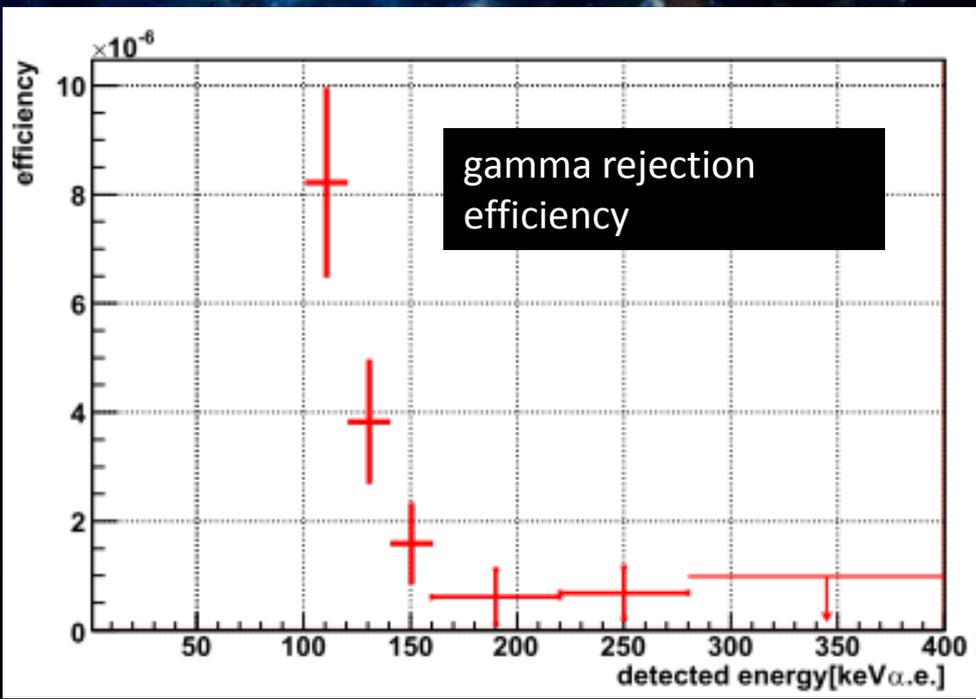

NEWAGE0.3a
152 torr CF4 gas

cf: $1e5\text{counts/kg/days} \sim 1\text{Bq/m}^3$

Gamma: ① length-cut

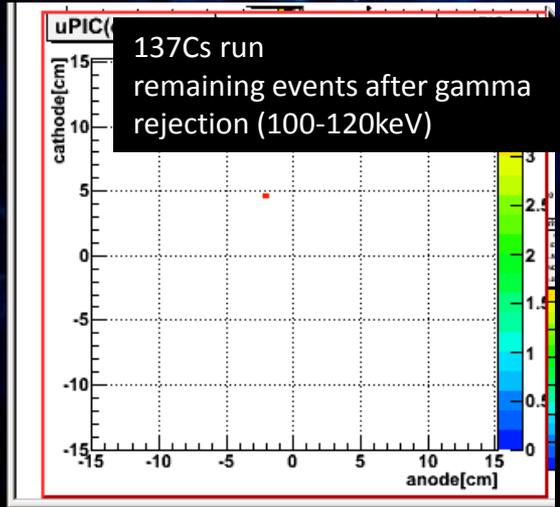

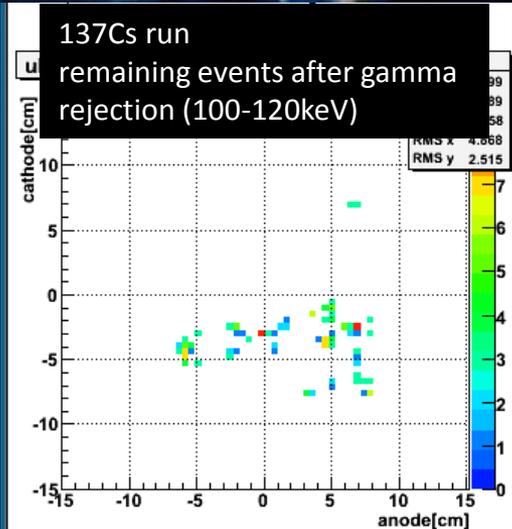

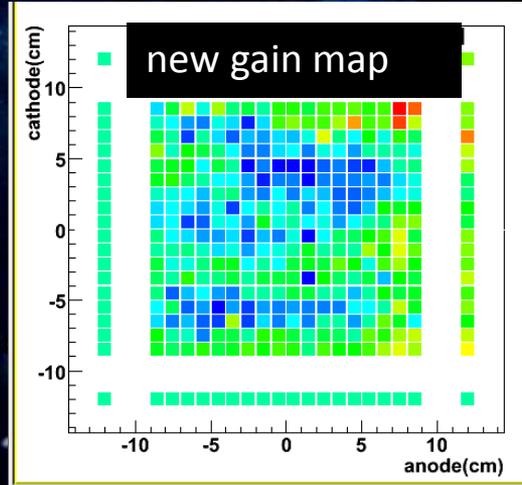

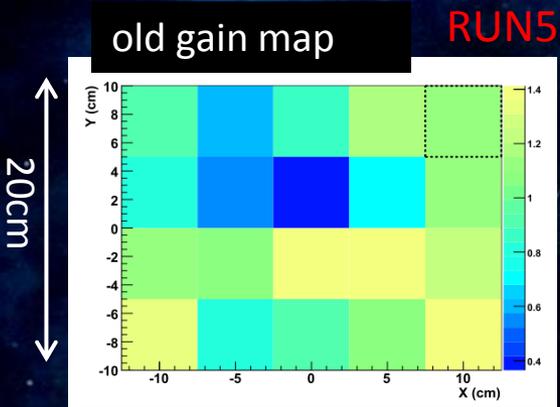

- energy vs length cut
- gamma rejection efficiency*: 8.1×10^{-6}

* gamma rejection efficiency=electron detection efficiency

Gamma: ② precise gain-map

gas gain is not uniform in 30 x 30 cm²

gamma rejection
8.1e-6

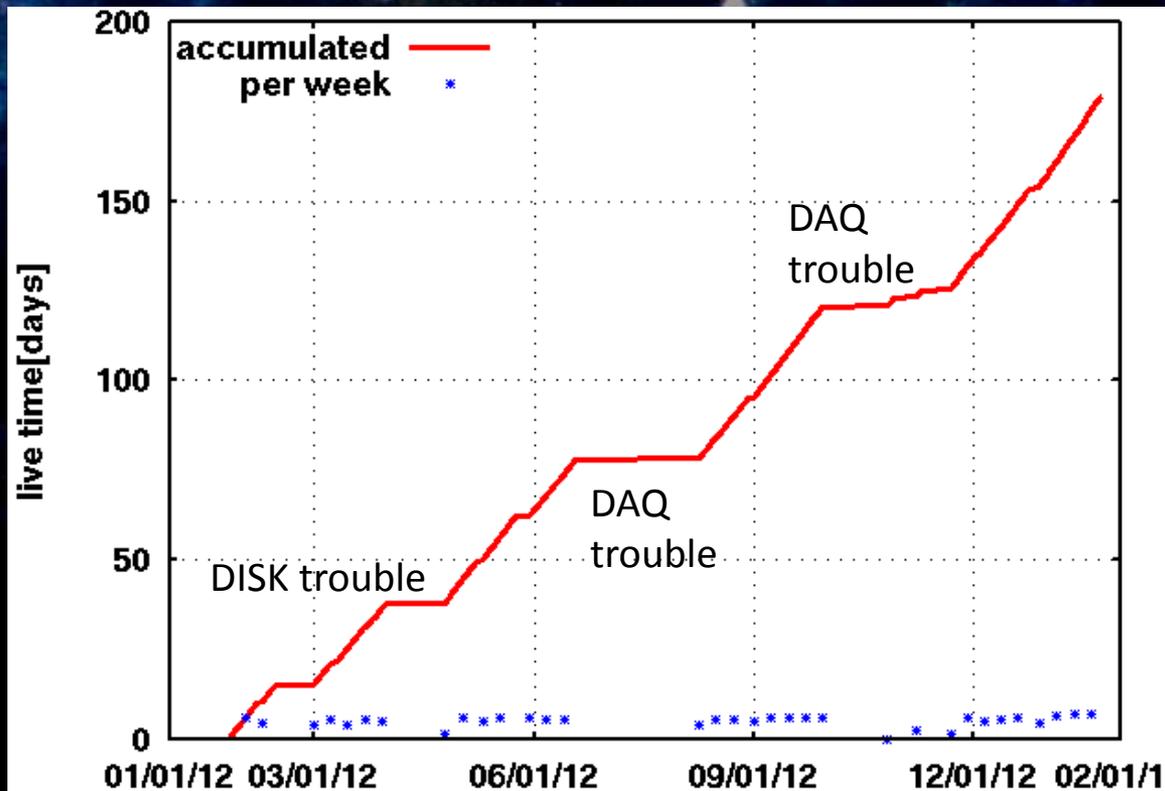

gamma rejection
1.0e-6>

NEWAGE-0.3a' underground run

- Underground run in 2012 (RUN13)

- Target gas: CF_4 152torr
- Fiducial volume: $14 \times 13 \times 31 \text{ cm}^3$
- Target mass: 0.00424kg

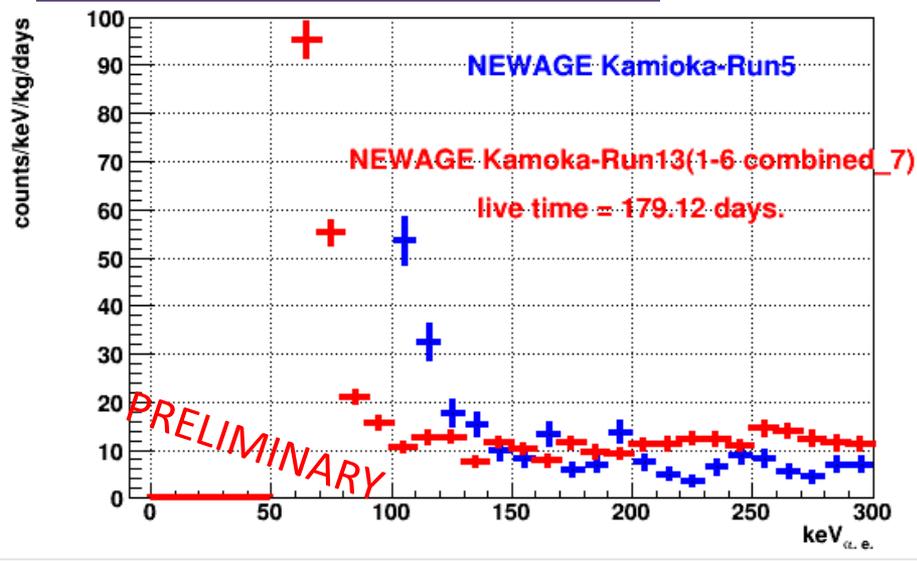

- Date: Jan. 23, 2012 - Jan. 24, 2013
- Live time: 179.12 days
- Exposure: 0.760 kg days

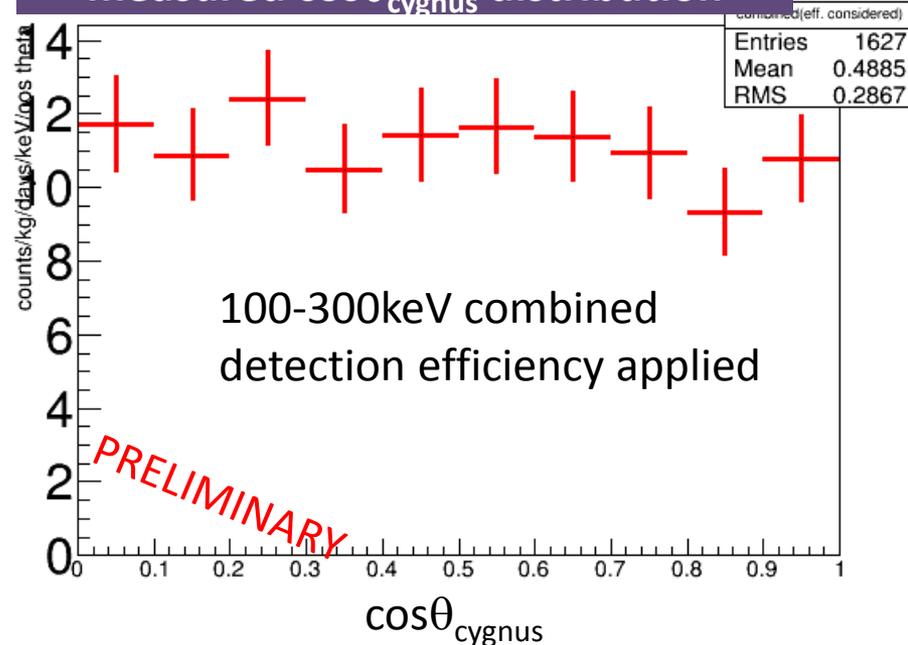

RUN13 result

- exposure: 0.760 kg days
- spectrum threshold: 100keV \Rightarrow 50keV
- rate: $\sim 1/5$ at 100keV
- $\cos \theta$ distribution: flat

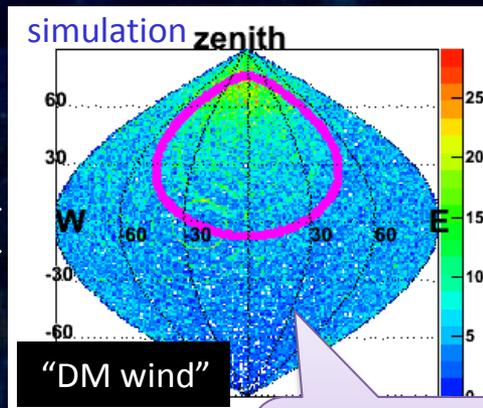

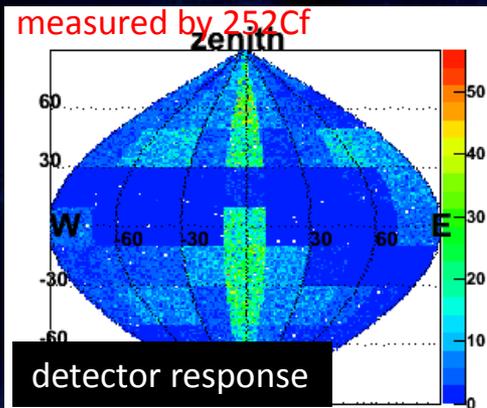

measured energy spectrum

measured $\cos \theta_{\text{cygnus}}$ distribution

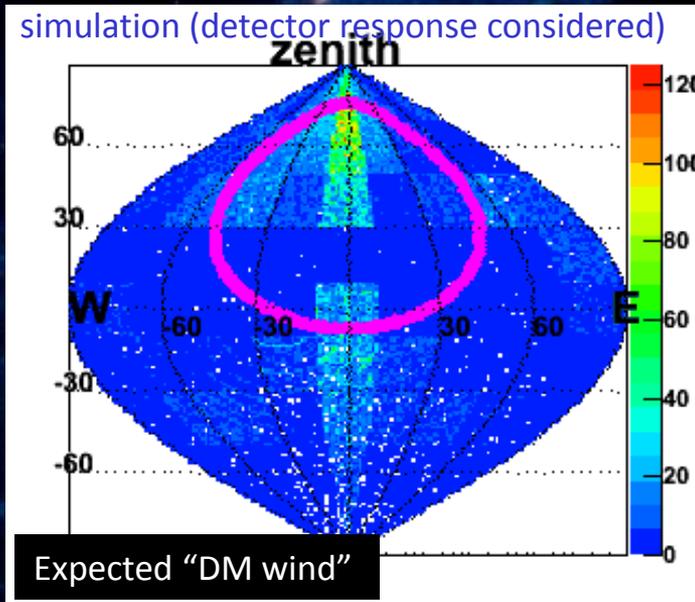

How to get direction sensitive limit

Direction sensitive limits

- 3100pb @ 150GeV

threshold=100keV
E resolution=30%
Ang. resolution 55°

Commissioning (NEWAGE-0.3b')

K. Nakamura *et al* 2012 *JINST* 7 C02023

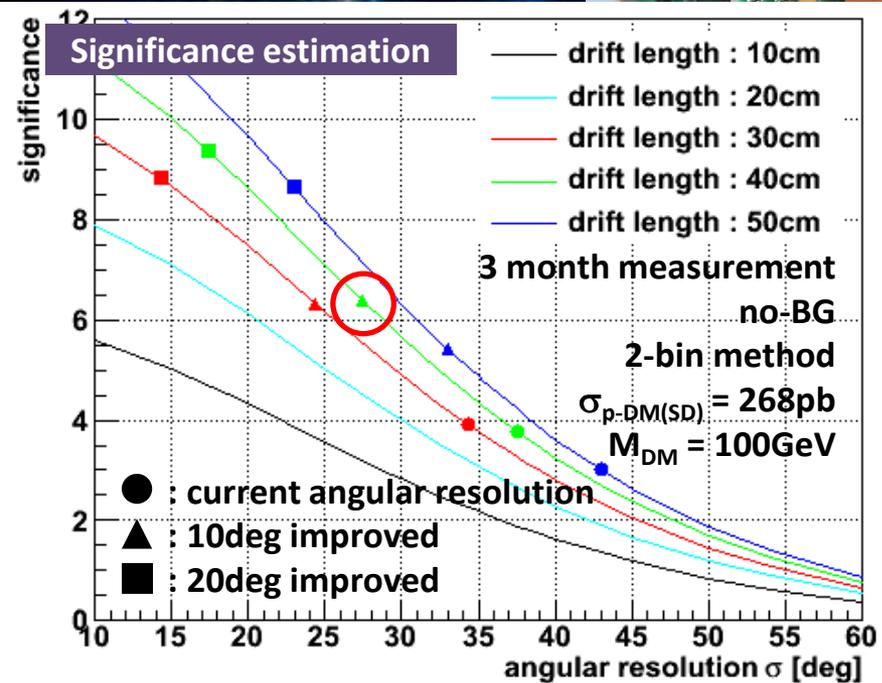

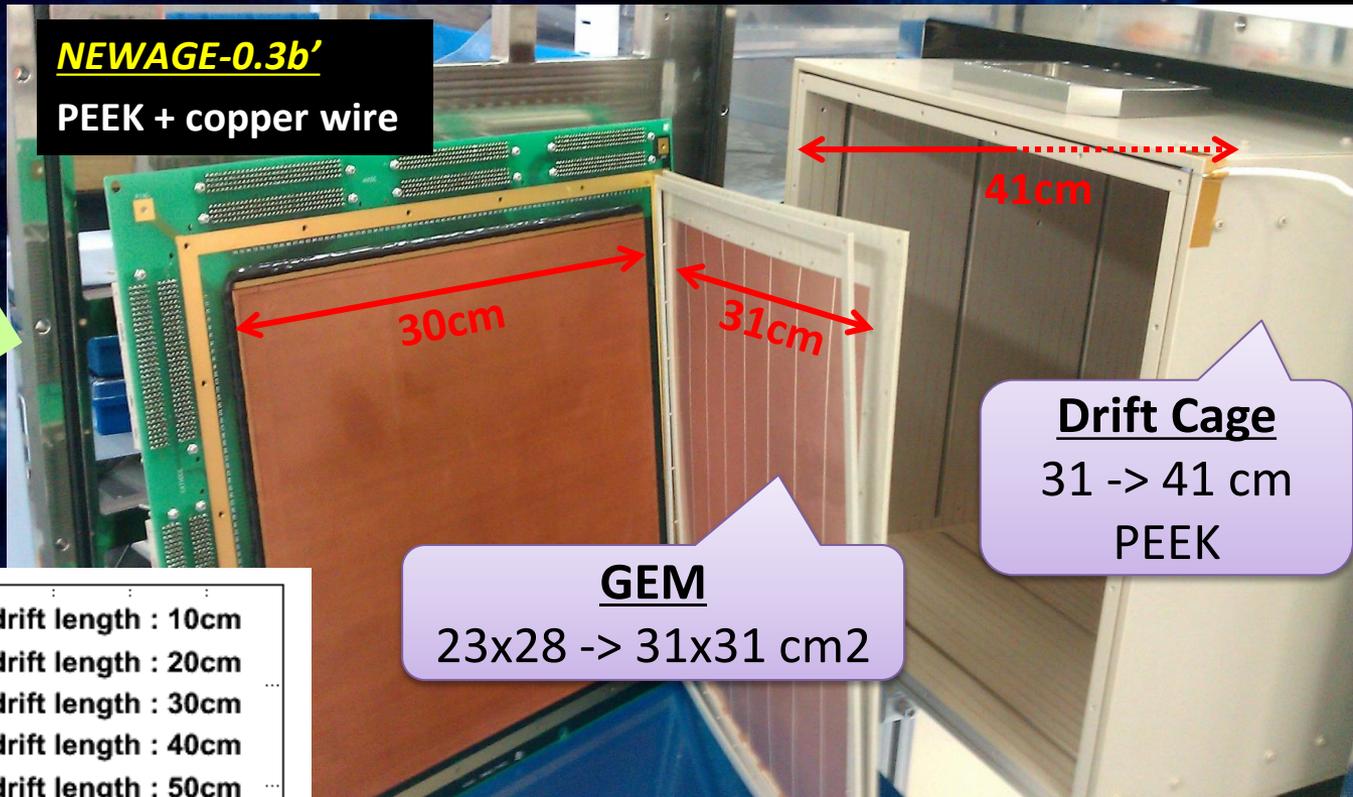

Detector Name	NEWAGE-0.3a'	NEWAGE-0.3b'	NEWAGE-0.1a
Detection volume	23 x 28 x 31 cm ³	30 x 30 x 41 cm ³	10 x 10 x 10 cm ³
Gas	CF ₄ 152torr	CF ₄ 76torr	CF ₄ 152torr
DAQ-mode	mode3	mode5	mode5
Place	Kamioka	Kamioka	Kobe
Status	DM search	Commissioning	Head-tail R&D

NEWAGE-0.3b'

- Developments at Kyoto (surface lab)

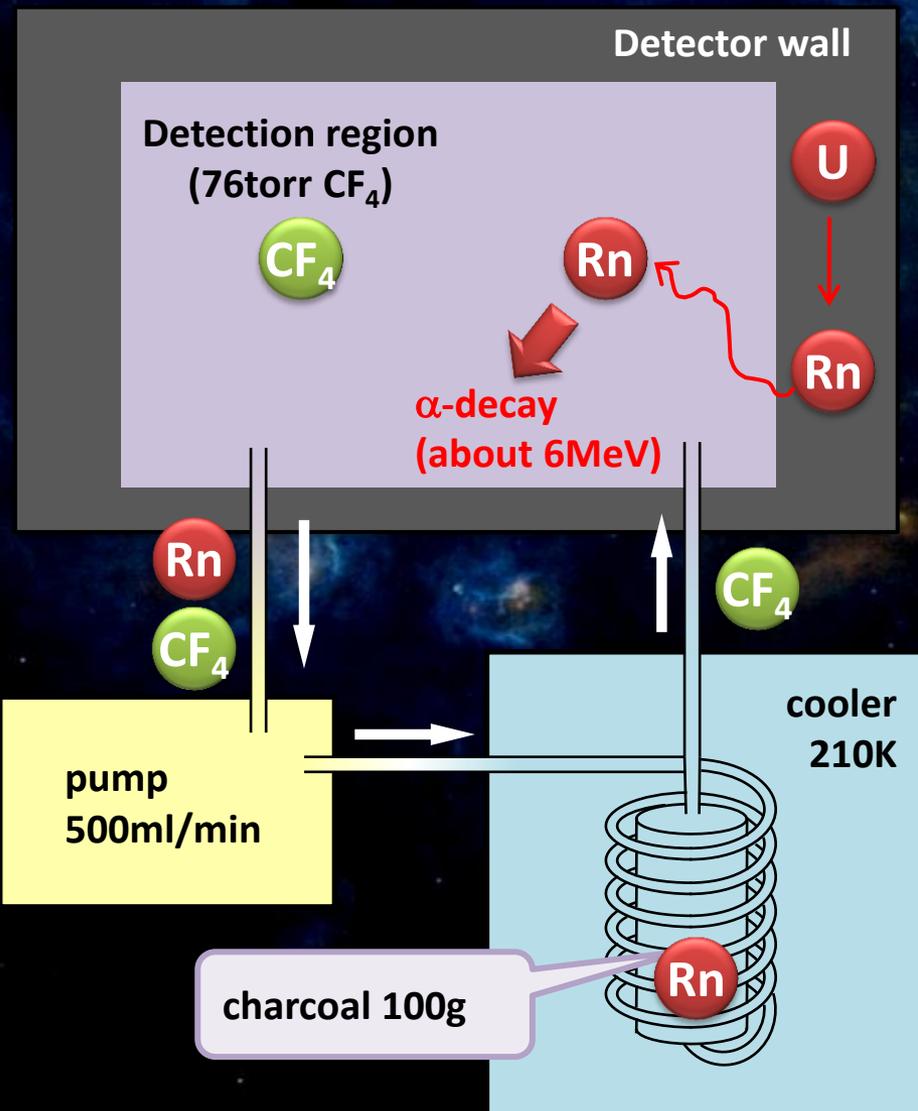

- Larger GEM
 - Longer drift length
 - PEEK drift cage
 - Cooled charcoal
 - Low pressure gas
 - DAQ upgrade
- Large size $\sim x2$
 - Low BG $\sim 1/10$
 - Low threshold $\sim 1/2$

NEWAGE-0.3b' : Geometry

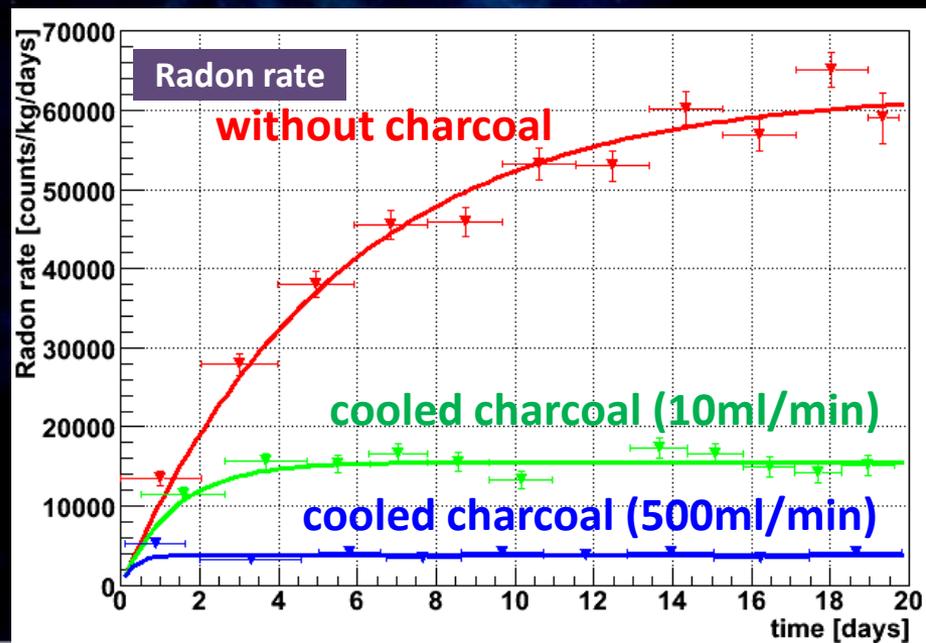

- Detection volume: 2 x NEWAGE-0.3a'
- PEEK for low BG

NEWAGE-0.3b : Circulation

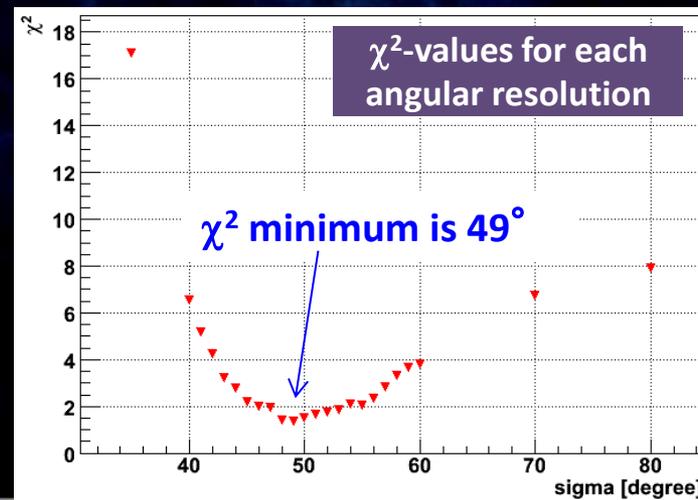

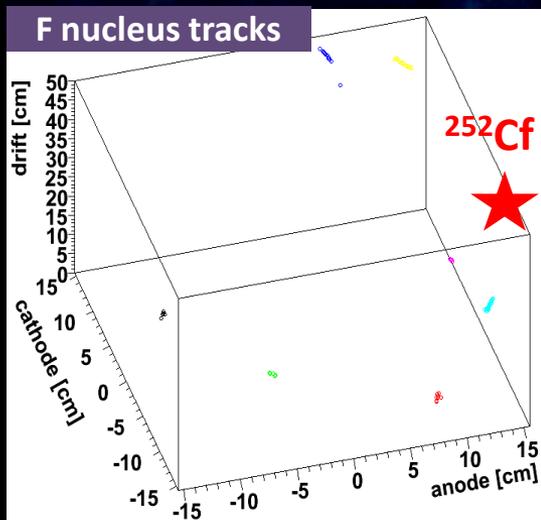

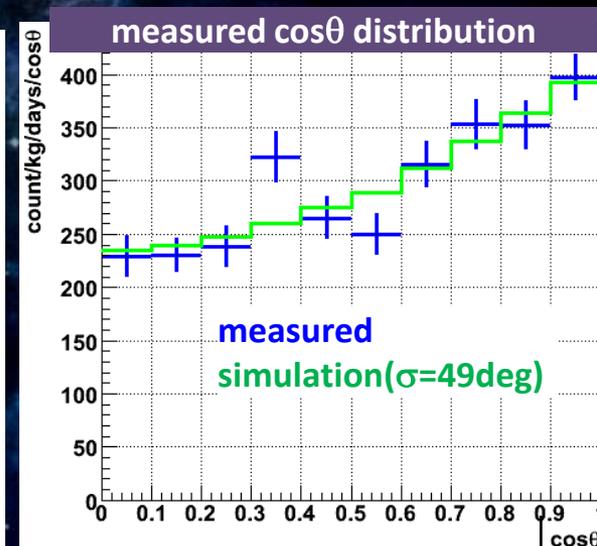

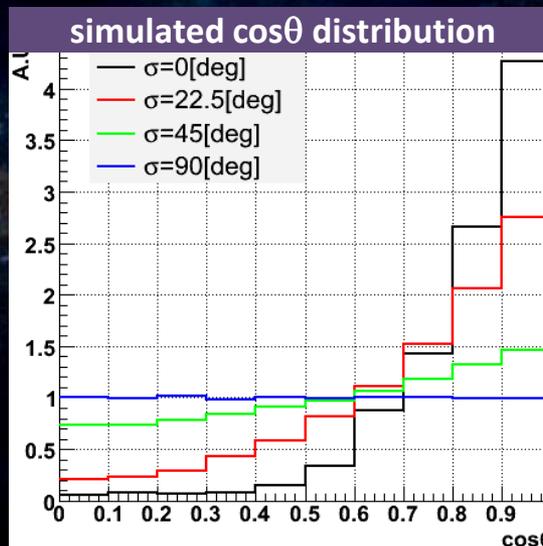

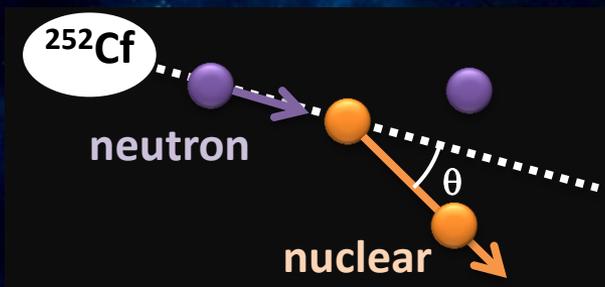

- Circulation with cooled charcoal
- Radon rate : $<1/10$

NEWAGE-0.3b: angular resolution

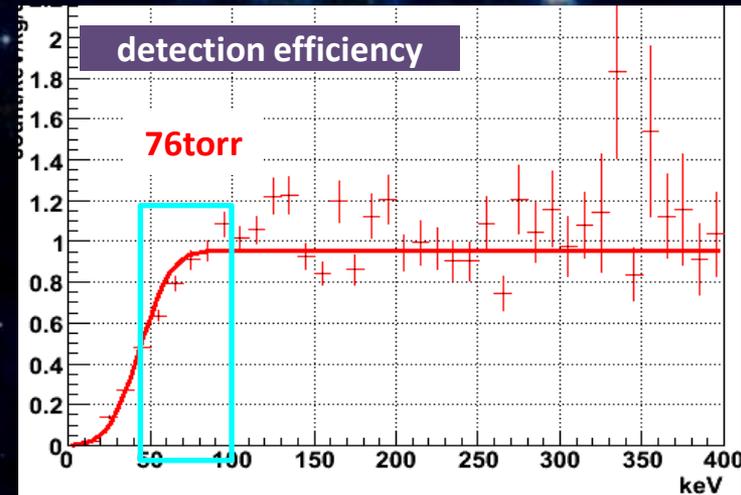

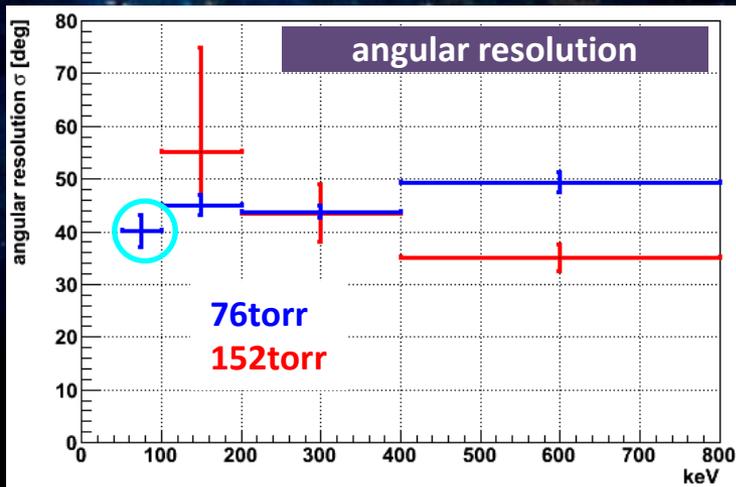

- Gas pressure: 152->76 torr (NEWAGE-0.3a'->NEWAGE-0.3b')
- Comparing $\cos\theta$ distribution measured to simulation

(measured with DAQ-mode1)

NEWAGE-0.3b : threshold

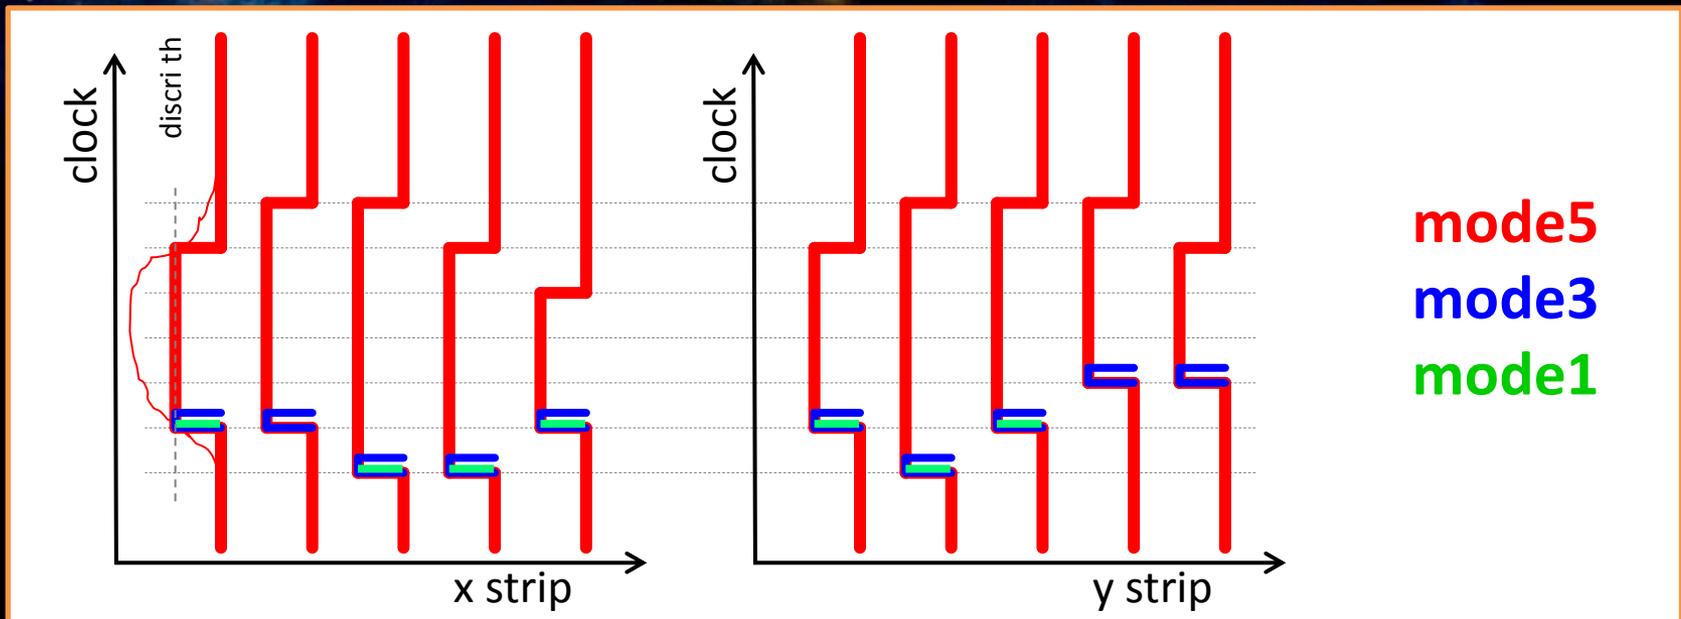

- Gas pressure: 152->76 torr (NEWAGE-0.3a'->NEWAGE-0.3b')
- Angular resolution: 40deg @50-100keV
- Detection efficiency: 60% @50keV

- Energy threshold with angular resolution:
100->50keV (by 152->76torr)

NEWAGE-0.3b' : DAQ upgrade

	Strip information (for each clock)	Time Over Threshold	Detector
mode5	all	Rise & Fall timing ("energy" of each strip)	NEWAGE-0.3b' NEWAGE-0.1a
mode3	all	Rise timing	NEWAGE-0.3a'
mode1	x-y coincidence max, min only	Rise timing	NEWAGE-0.3b

- We confirmed DAQ-mode5 works with no bug

Transfer

From Kyoto to Kamioka
(Mar. 2013)

Data aquisition

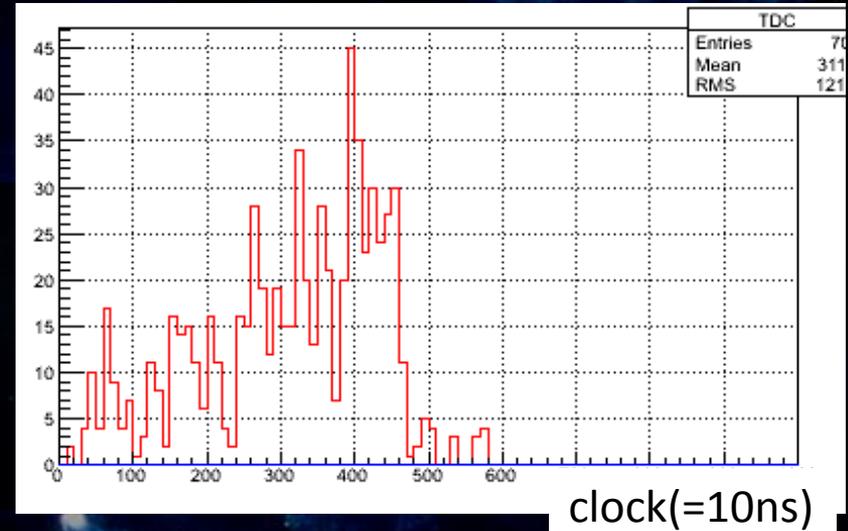

μ -TPC

gas circulation

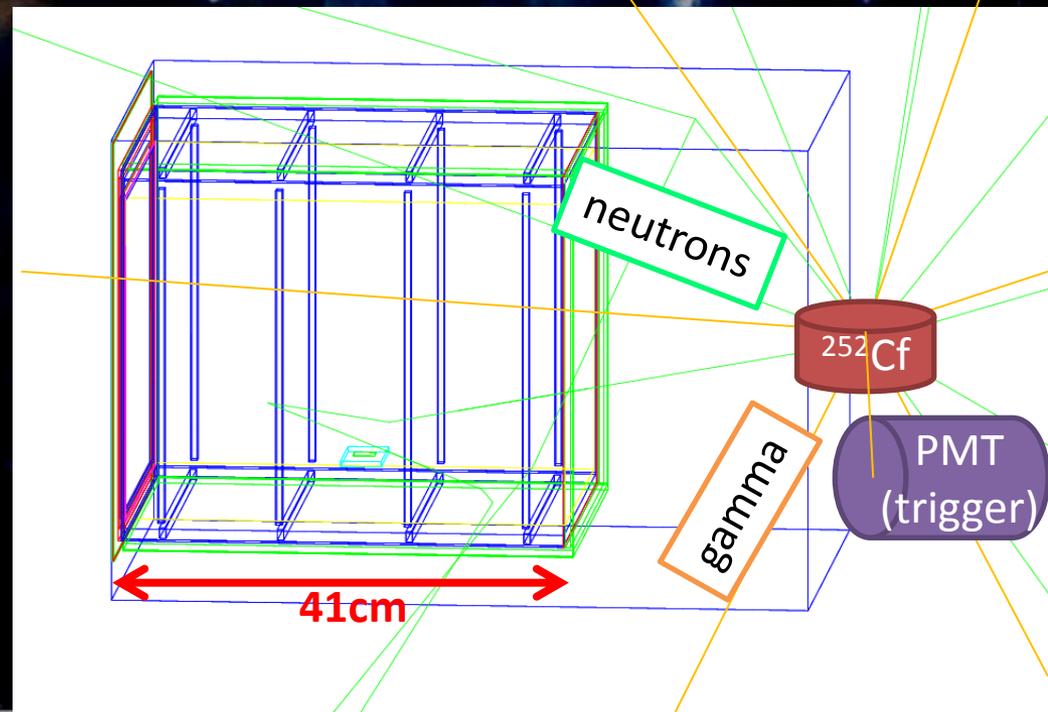

We're visiting here at "Kamioka tour"

drift velocity

- Measure clock of drift
 - $4.7\mu\text{s}$ for 41cm $\rightarrow v=8.7\text{cm}/\mu\text{s}$
- Consistent to surface measurement

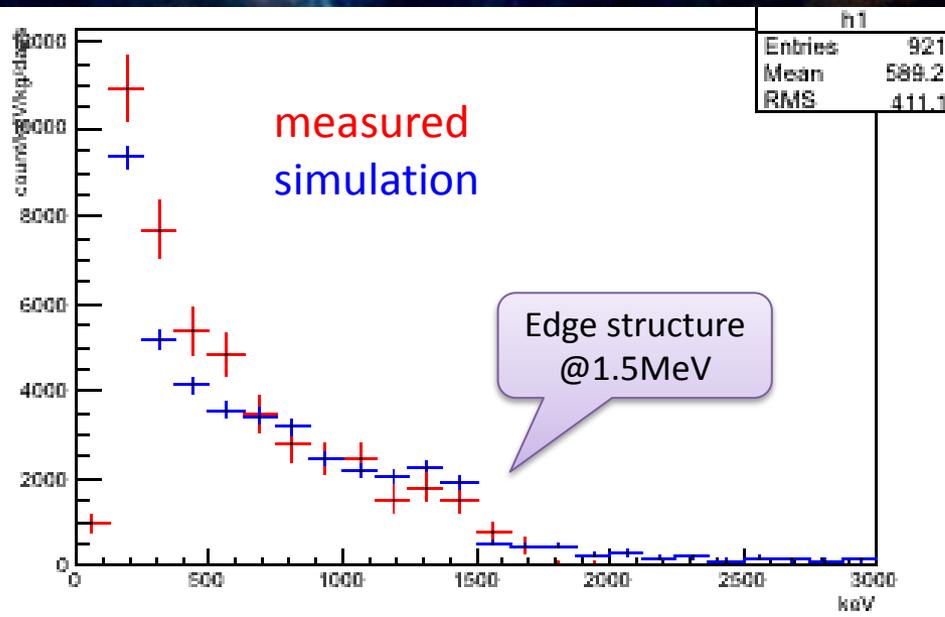

- Electric Field: $0.095\text{kV}/\text{cm}$
- gas: CF_4 76torr

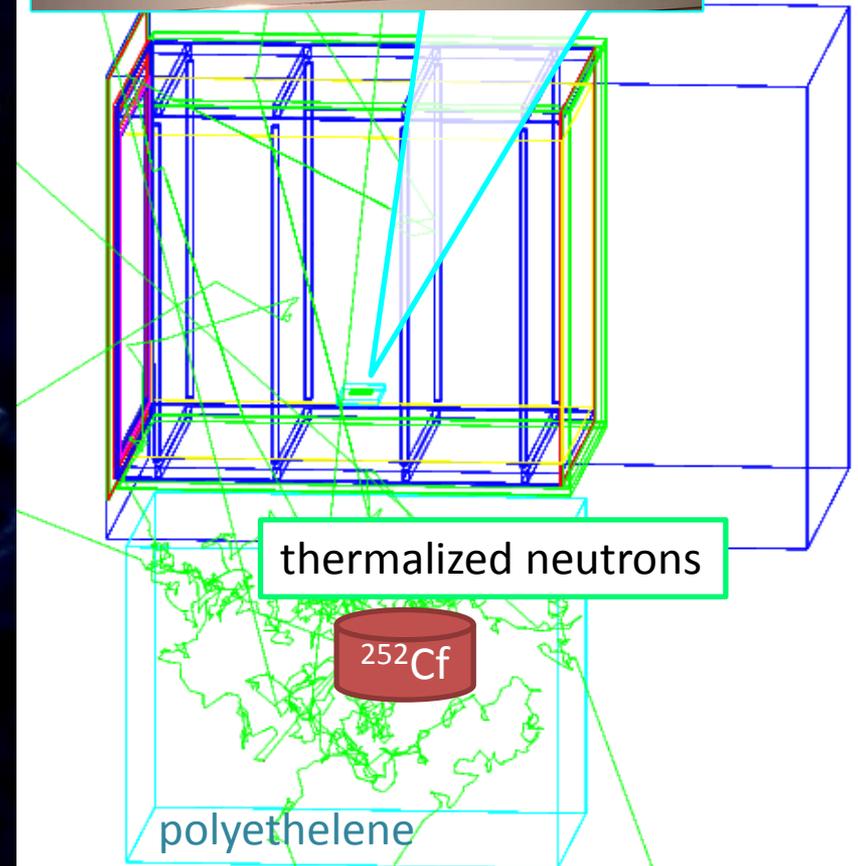

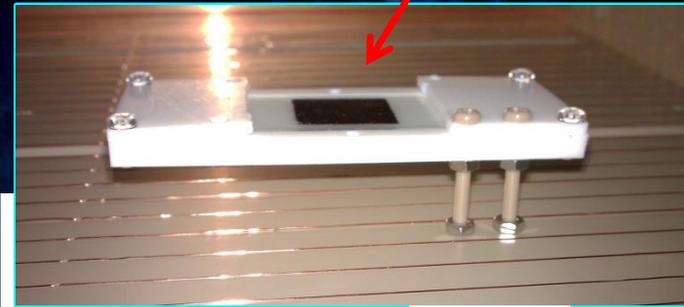

calibration

- Calibration with ^{10}B
 - $^{10}\text{B}(n,\alpha)^7\text{Li}$ reaction
 - ($Q=2.70\text{MeV} \sim 1.5\text{MeV } \alpha$)

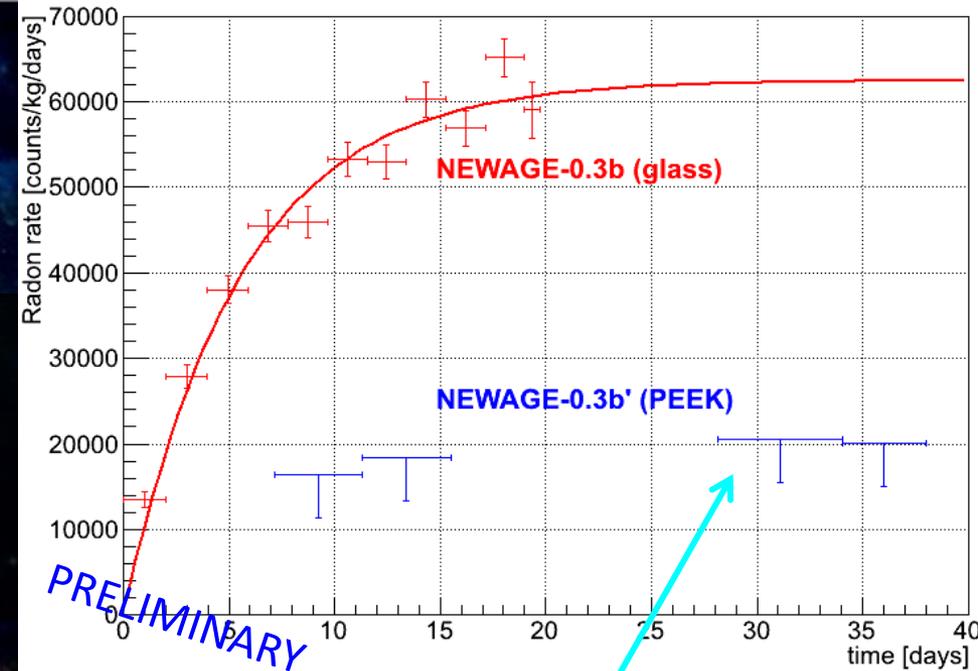

^{10}B (1.5 μm thickness) coated glass

BG radon

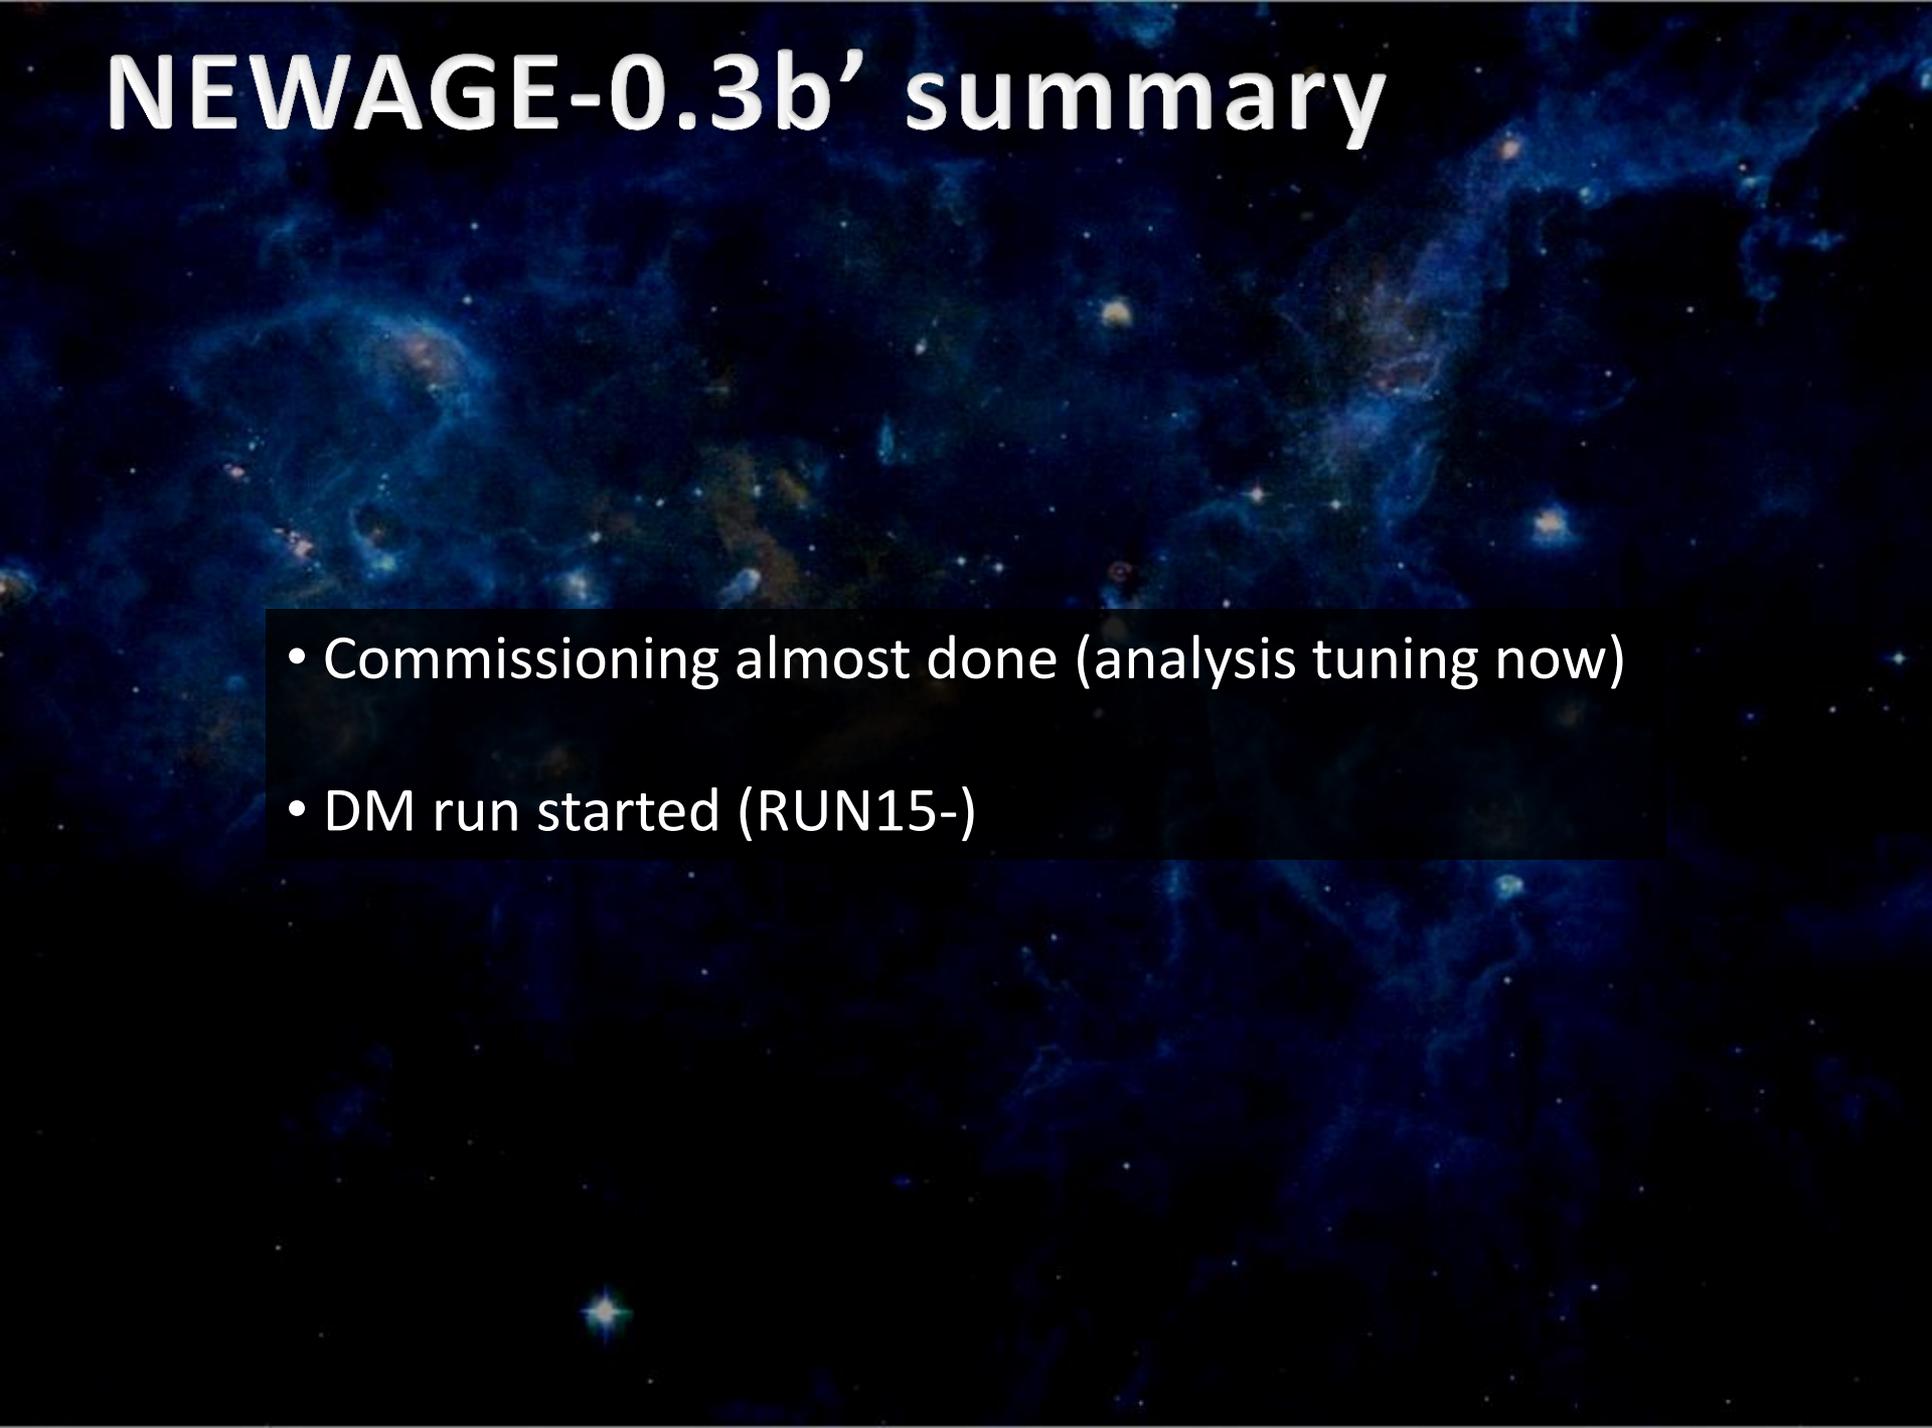

- Drift cage Material: glass -> PEEK
- radon rate: <1/3
- Further 1/10 with cooled charcoal

Underground runs

run#	RUN5 (PLB2010)	...	RUN13	RUN14	RUN15
Period	2008	...	2012	2013 Mar	2013 April
Detector	NEWAGE-0.3a	...	NEWAEG-0.3a'	NEWAGE-0.3b'	
Gas circulation	room temp charcoal	...	room temp charcoal	without charcoal	cooled charcoal

NEWAGE-0.3b' summary

- Commissioning almost done (analysis tuning now)
- DM run started (RUN15-)

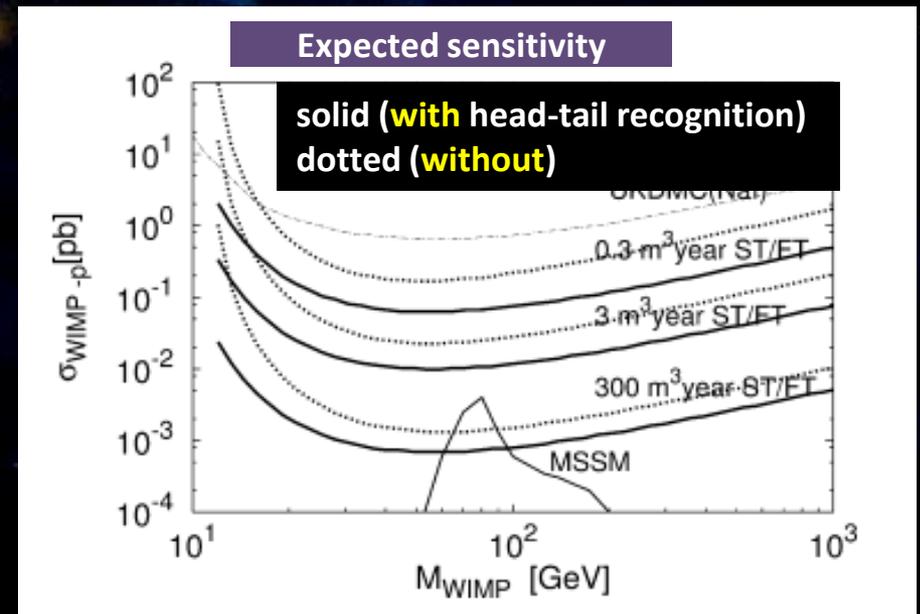

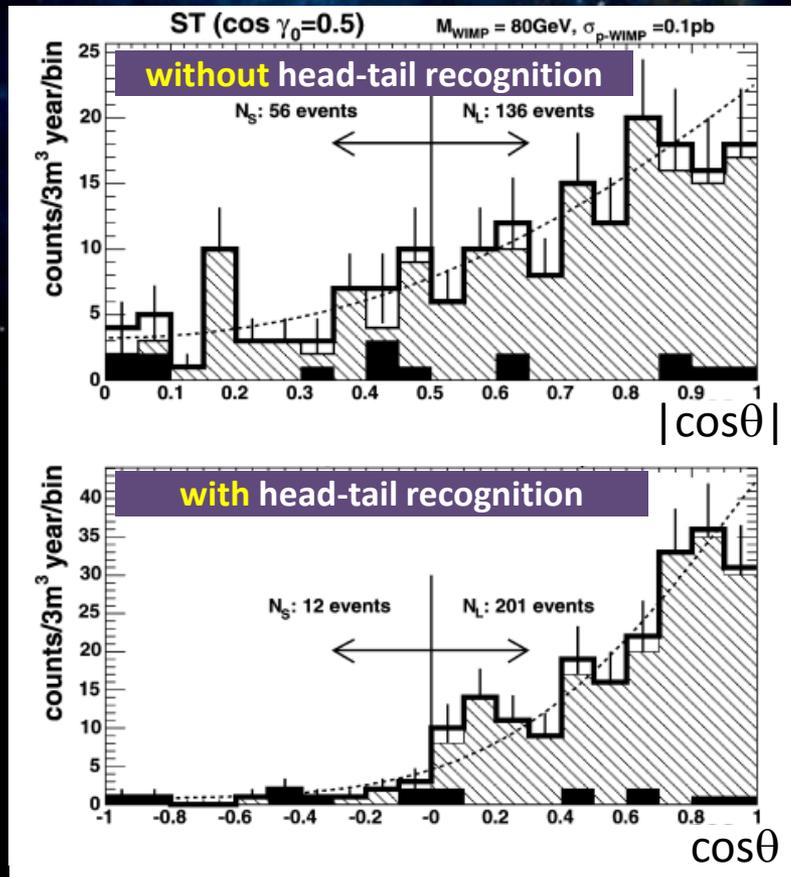

Head-tail R&D

(NEWAGE-0.1a)

Detector Name	NEWAGE-0.3a'	NEWAGE-0.3b'	NEWAGE-0.1a
Detection volume	23 x 28 x 31 cm ³	30 x 30 x 41 cm ³	10 x 10 x 10 cm ³
Gas	CF ₄ 152torr	CF ₄ 76torr	CF ₄ 152torr
DAQ-mode	mode3	mode5	mode5
Place	Kamioka	Kamioka	Kobe
Status	DM search	Commissioning	Head-tail R&D

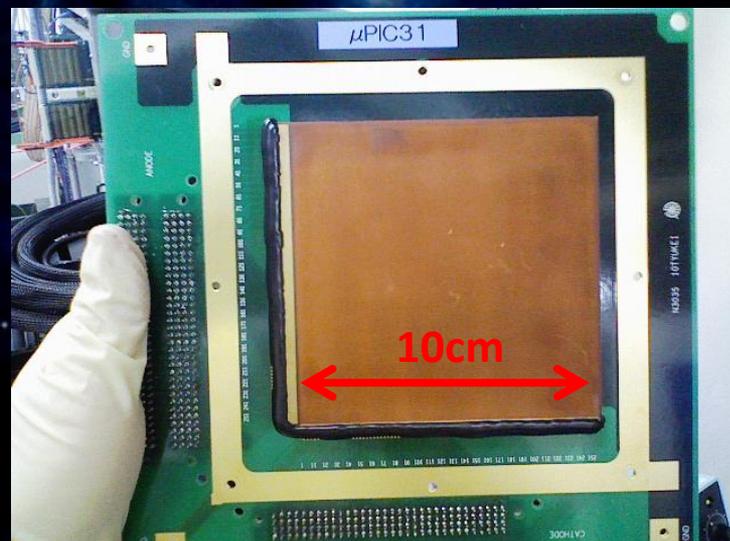

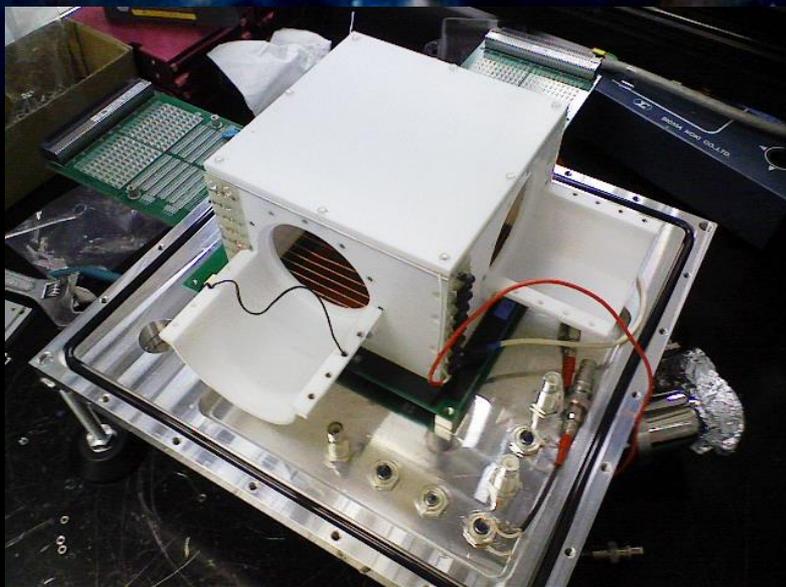

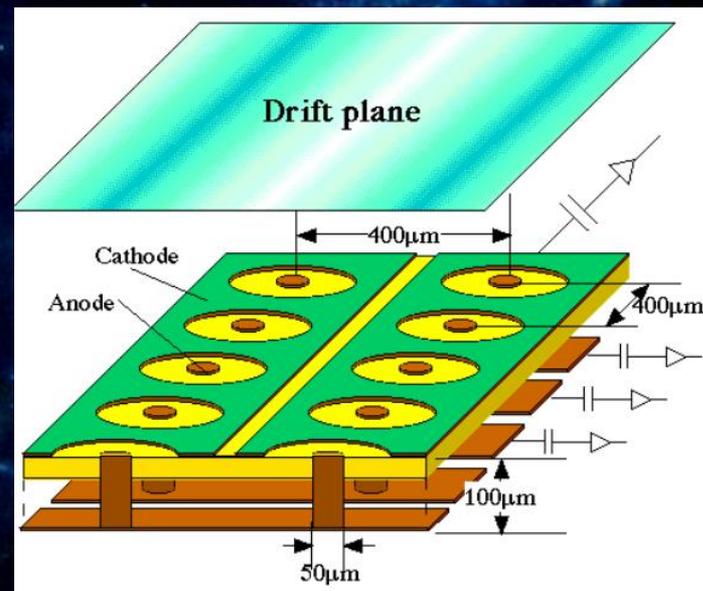

Head-tail introduction

- Head-tail recognition of nuclear track
-> Sensitivity improvement: 3 ~ 10 times

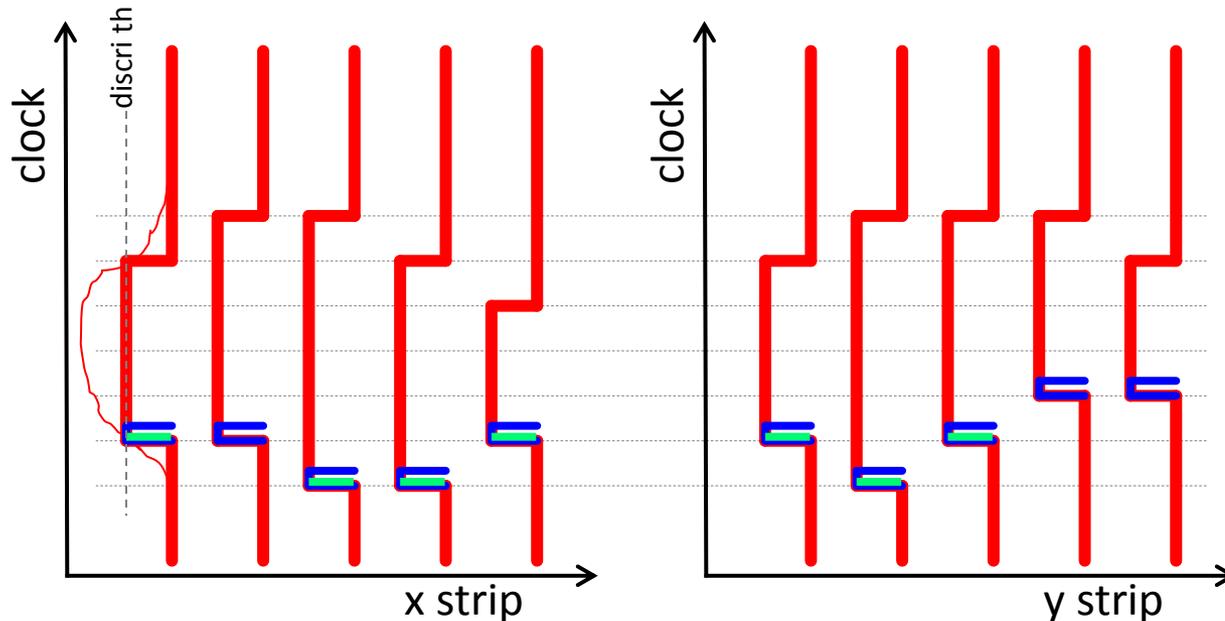

NEWAGE-0.1a detector

- μ TPC: 10 x 10 x 10cm³
- readout: 400 μ m pitch
- GEM: polyimide, 100 μ m
- gas: CF₄, 152torr

DAQ-mode5 (again)

	Strip information (for each clock)	Time Over Threshold	Detector
mode5	all	Rise & Fall timing ("energy" of each strip)	NEWAGE-0.3b' NEWAGE-0.1a
mode3	all	Rise timing	NEWAGE-0.3a'
mode1	x-y coincidence max, min only	Rise timing	NEWAGE-0.3b

mode5
mode3
mode1

XZ view

Bragg curve(X)

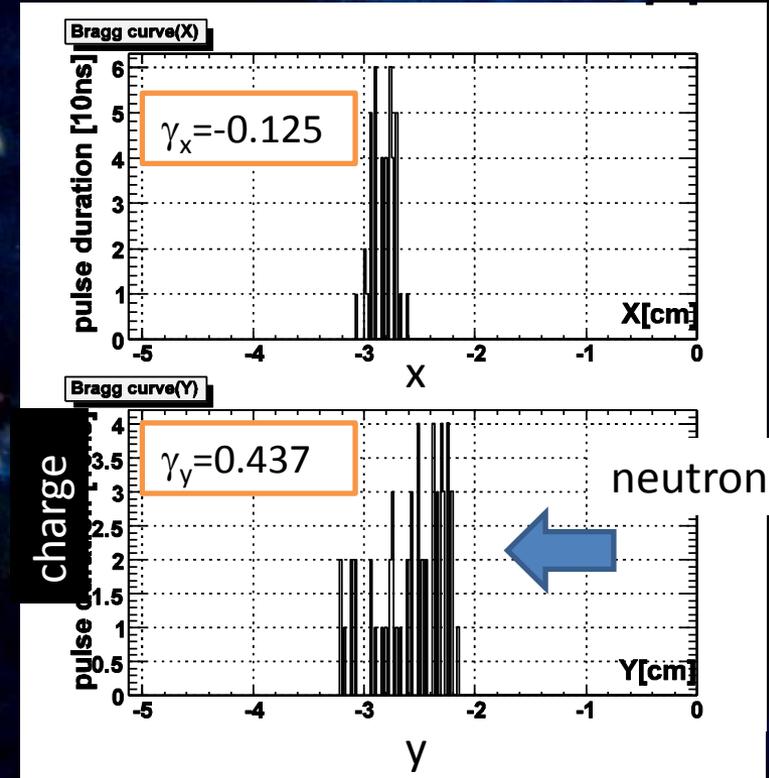

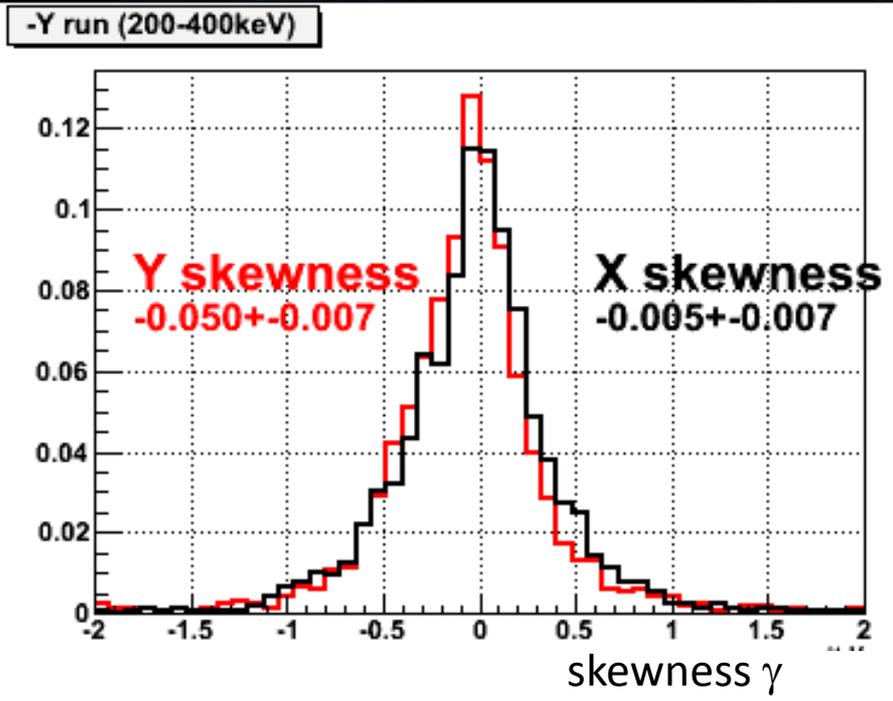

Bragg curve(Y)

Symmetry parameter: skewness

$$\gamma_{x_i} = \frac{\langle (q(x_i) \cdot (x_i - \langle x_i \rangle)^3) \rangle}{\langle (q(x_i) \cdot (x_i - \langle x_i \rangle)^2)^{3/2} \rangle}$$

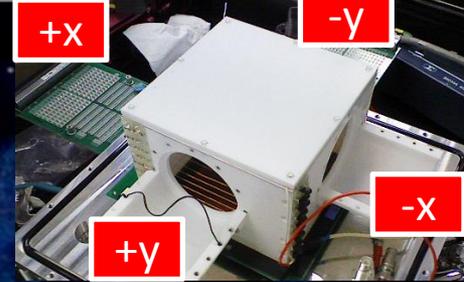

- If symmetric, $\gamma=0$

- difference was observed

Head-tail recognition

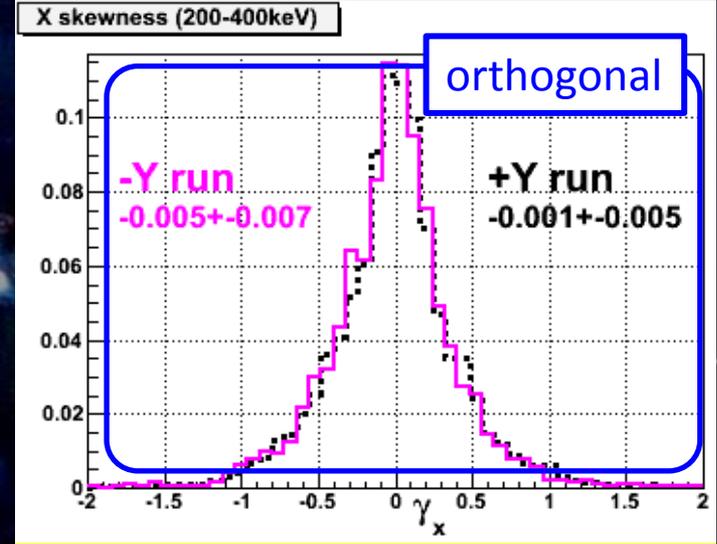

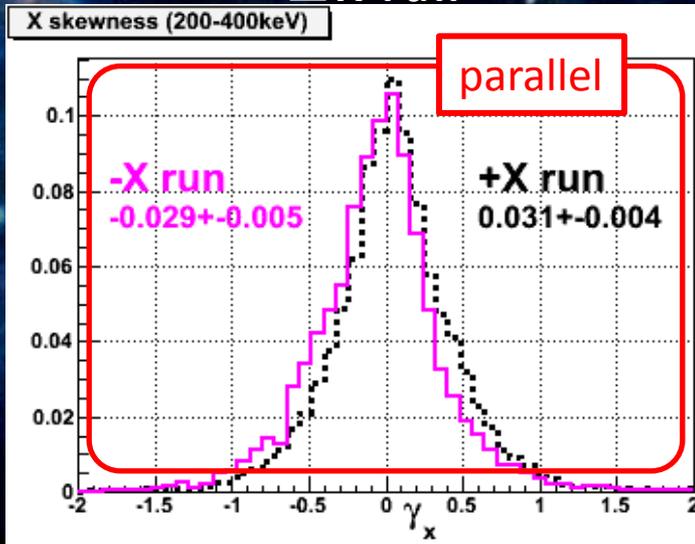

($^{252}\text{Cf}@30\text{cm}$)

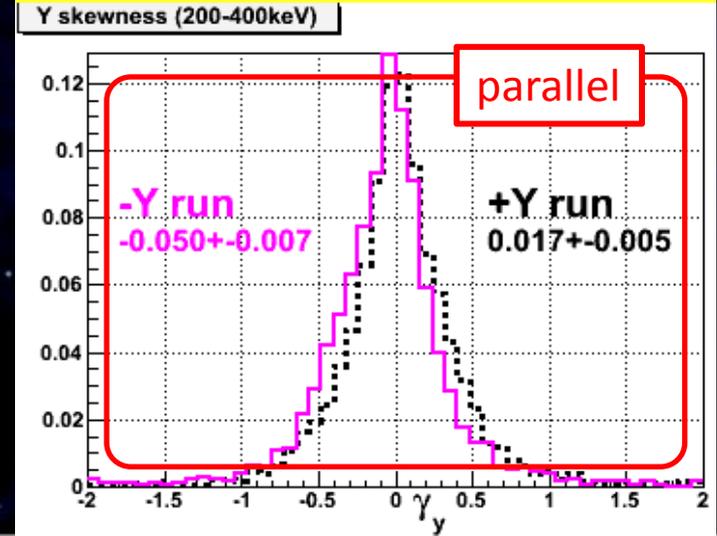

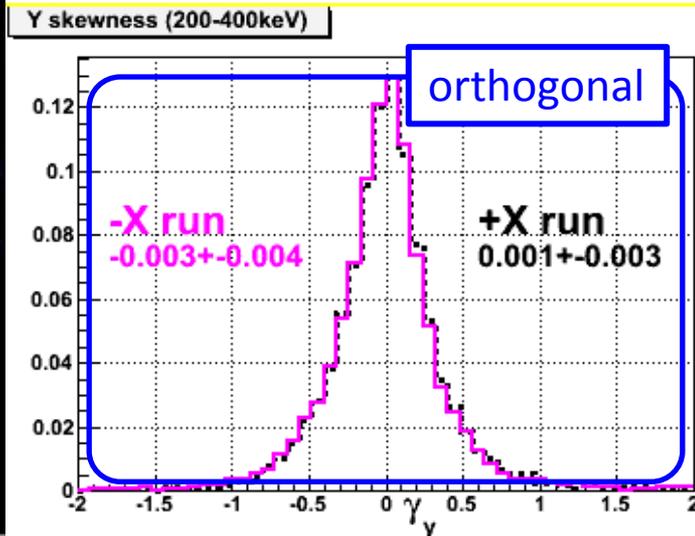

$\pm X$ run

$\pm Y$ run

X skewness

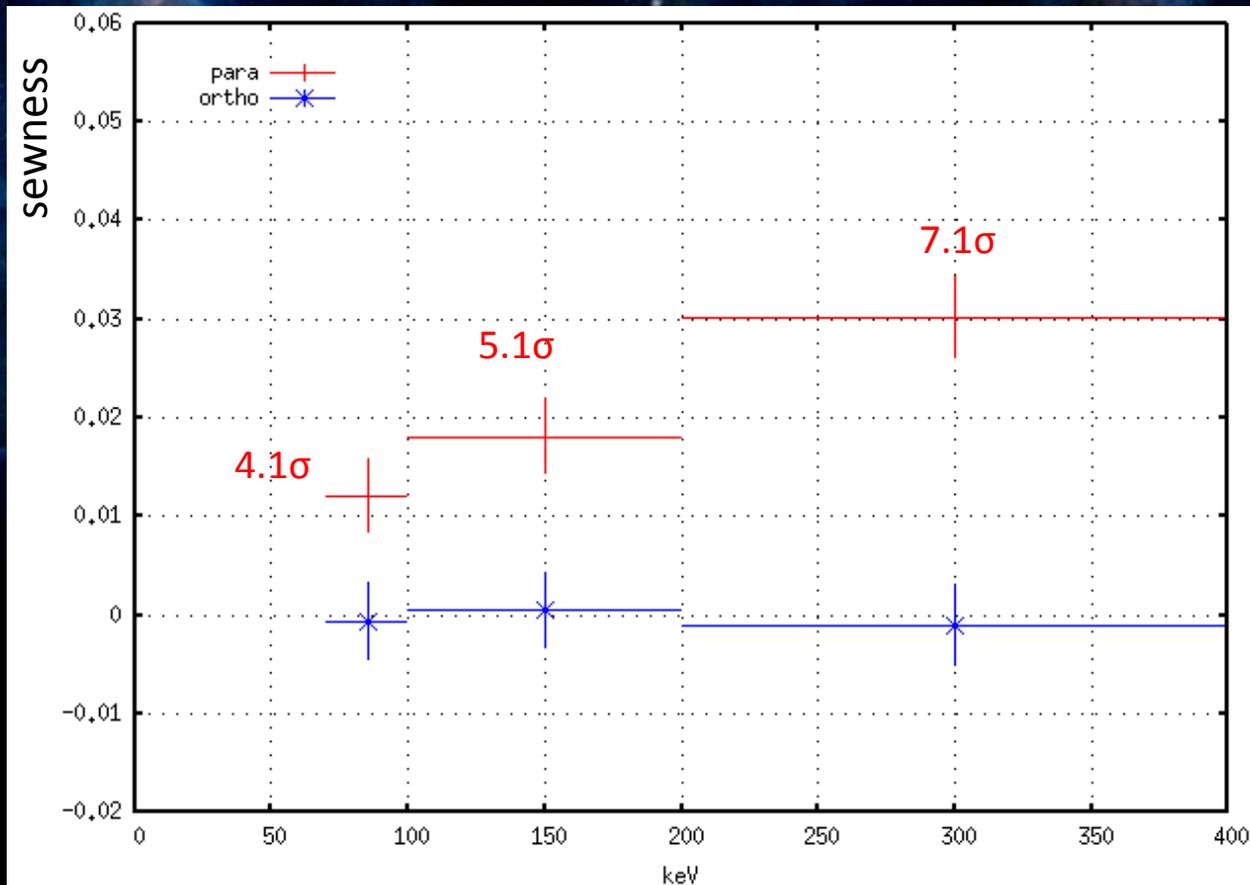

Y skewness

Combined results

- Energy dependence of parallel and orthogonal skewness
- statistically significant ($>70\text{keV}$)

- To do for next
 - the skewness definition improvement
 - 3-dimensional track

Summary

Latest limit by NEWAGE-0.3a'

- Direction sensitive limit updated:
450pb @150GeV

Commissioning of NEWAGE-0.3b'

- Commissioning almost done &
Started DM run

Head-tail R&D using NEWAGE-0.1a

- 2-dim Head-tail can be
statistically seen for >70keV

Summary

Latest limit by NEWAGE-0.3a'

- Direction sensitive limit updated:
450pb @150GeV

Commissioning of NEWAGE-0.3b'

- Commissioning almost done &
Started DM run

Head-tail R&D using NEWAGE-0.1a
